Art Unit: 2155

DETAILED ACTION

1. Claims 14-26 are presented for examination.

Claims 1-13 have been canceled.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claim 20 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 09/695,203. Although the conflicting claims are not

identical, they are not patentably distinct from each other because modifications are obvious.

"A later patent claim is not patentably distinct from an earlier patent claim if the later claim is obvious over, or anticipated by, the earlier claim. In re Longi, 759 F.2d at 896, 225 USPQ at 651 (affirming a holding of obviousness-type double patenting because the claims at issue were obvious over claims in four prior art patents); In re Berg, 140 F.3d at 1437, 46 USPQ2d at 1233 (Fed. Cir. 1998) (affirming a holding of obviousness-type double patenting where a patent application claim to a genus is anticipated by a patent claim to a species within the genus). "ELILILLY AND COMPANY v BARR LABORATORIES, INC., United States Court of Appeals for the Federal Circuit, ON PETITION FOR REHEARING EN BANC (DECIDED: May 30,2001).

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35
U.S.C. 102 that form the basis for the rejections under this section made in this
Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Art Unit: 2155

The changes made to 35 U.S.C. 102(e) by the American Inventors

Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology

Technical Amendments Act of 2002 do not apply when the reference is a U.S.

patent resulting directly or indirectly from an international application filed before

November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 14-15 and 20-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Chu et al. (Chu) (US 6,683,858 B1).

Regarding claim 20, Chu teaches a method for enabling conferencing over a computer network (Fig. 1) comprising:

- (A) identifying a first of the selected plurality of client processes which is transmitting an active stream from a first single audio source (i.e. determining/identifying clients who are currently active speakers or client process which is transmitting an active stream, col. 2 lines 25-27);
- (B) retransmitting the active audio stream of the first identified client process to others of the plurality of client processes in unmixed form (i.e., sending the multiplexed/unmixed stream to each of clients, col. 2 lines 37-39),
- (C) identifying a second of the selected plurality of client processes which is transmitting an active audio stream from a second single audio source

(i.e. determining/identifying clients who are currently active speakers or client process which is transmitting an active stream, col. 2 lines 25-27); and

(D) retransmitting the active audio streams of the first and second audio sources associated with the identified first and second client processes, respectively to others of the plurality of client processes in unmixed form (i.e., sending the multiplexed/unmixed stream to each of clients, col. 2 lines 37-39).

Regarding claim 21, Chu teaches the method of claim 20 wherein the selected plurality of client processes are configured to receive the first and second active audio streams in unmixed form from the server process and to mix the first and second active audio streams into a form suitable for presentation (i.e., multiplexed packets are received and mixed at clients, col. 4 lines 50-52).

Claim 14 represents a system that is parallel to claim 20. Claim 14 does not teach or define any new limitation above claim 20 and therefore is rejected for similar reasons.

Claim 15 does not teach or define any new limitation above claim 21 and therefore is rejected for similar reason.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

7. Claims 16-19 and 22-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chu in view of VanDeusen et al. (VanDeusen) (US 6,598,172 B1).

Regarding claim 22, Chu teaches the method of claim 20.

Chu does not teach modifying one of the time stamp, source identifier and sequence number of the packet headers in the active stream of audio packets.

VanDeusen teaches modifying one of the time stamp and source identifier of the packets headers in the active stream of audio packets (col. 2 lines 9-12 and col. 4 line 23-col. 5 line 38).

It would have been obvious to one having ordinary skill in the art at the time of the invention to modify Chu to modify one of the time stamp and source identifier of the packets headers in the active stream of audio packets as in VanDeusen. One would be motivated to do so to allow the time stamps of the audio packets to be adjusted in order to compensate for any differential between the encoding and decoding clocks (VanDeusen, col. 5 lines 30-33).

Regarding claim 23, Chu-VanDeusen teaches the method of claim 22 further comprising:

(B1a) retransmitting the packets of the active stream of audio packets to others of the plurality of client processes (col. 5 lines 44-47).

Chu does not explicitly teach the packets are modified packets.

VanDeusen teaches the packets are modified packets (col. 2 lines 9-12 and col. 4 line 23-col. 5 line 38).

It would have been obvious to one having ordinary skill in the art at the time of the invention to modify Chu to modify the packets as in VanDeusen. One would be motivated to do so to allow the time stamps of the audio packets to be adjusted in order to compensate for any differential between the encoding and decoding clocks (VanDeusen, col. 5 lines 30-33).

Regarding claim 24, Chu-VanDeusen teaches the method of claim 20 wherein selected of the plurality of client processes are configured to transmit an active stream of video data (VanDeusen, col. 5 liens 20-23).

Regarding claim 25, Chu-VanDeusen teaches the method of claim 24 further comprising:

identifying one of the selected plurality of client processes which is (E) transmitting an active video/audio stream (Chu, col. 2 lines 25-27).

Regarding claim 26, the method of claim 25 further comprising:

Art Unit: 2155

(F) transmitting the active video/audio stream of the one identified
 client process to others of the plurality of client processes (Chu, col. 2 lines 55 56).

Claim 16 does not teach or define any new limitation above claim 22 and therefore is rejected for similar reason.

Claim 17 does not teach or define any new limitation above claim 23 and therefore is rejected for similar reason.

Claim 18 does not teach or define any new limitation above claim 25 and therefore is rejected for similar reason.

Claim 19 does not teach or define any new limitation above claim 26 and therefore is rejected for similar reason.

Response to The Declaration of Prior Invention Under 37 CFR 1.131 filed April 17, 2006

8. The Declaration of Prior Invention filed on 04/17/2006 under 37 CFR 1.131 has been considered, however, it is not persuasive because of the following reason:

The Declaration of Prior Invention Under 37 CFR 1.131 filed April 16, 2006 has been considered. However, it has not been signed by all inventors and

Art Unit: 2155

petition under 37 CFR 1.47 has not been granted to overcome the inventors who can not be reached to sign. Therefore, the Declaration is not sufficient to establish invention of the subject matter of the rejected claims prior to the effective date of Chu et al. (June 28, 2000).

Accordingly, claims 14-26 are respectfully rejected.

Conclusion

9. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Oanh Duong whose telephone number is (571) 272-3983. The examiner can normally be reached on Monday-Friday, 9:30AM-6:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Saleh Najjar can be reached on (571) 272-4006. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
